

involved in the lack of voluntary control. It is pointed out that frequently motivations seem to be excuses, while at other times they serve as truly useful means of solving the problem.

The concluding section of the text is devoted to some of the common environmental factors which are associated with the many common ego-desires which motivate basic behavior patterns.

The bibliography is very limited, there are no footnote citations, and no index. The table of contents is very brief. The book is easy to read and might be of interest to corrective therapists interested in a philosophical approach to human behavior.
